Loan Management System - Project Description

This is a staff-only loan management system designed for use by Admins and Loan Officers. The app is built using a Django backend, PostgreSQL database, and a front-end using HTML, CSS, and JavaScript. It is structured, modular, audit-friendly, and professional. There is no borrower login, and all actions are performed by authorized staff.

Core Features to Build

User & Access Management

- Two roles: Admin and Loan Officer
- Role-based permissions
- CRUD (Create, Read, Update, Delete) for user accounts
- User account creation with these fields username password first_name last_name email role *(choices: Administrator, Loan Officer)* employee_id phone_number branch profile_picture date_of_birth address emergency_contact_name emergency_contact_phone hire_date is_active

Borrower Management

- Add/edit/view borrower profiles
- Store ID documents
- Capture:
- - Personal details (name, DOB, etc.)
- - ID details (type, card number)
- - Address (ward, district, region)
- - Next of kin details
- - Registration info (branch, officer, date)
- - System-generated data: borrower ID, loan stats, collateral, loan/saving history, SMS history

Loan Management

- Multiple loan types (e.g., personal, business)
- Custom loan terms: interest, frequency, duration
- Application + approval workflow
- Track statuses: pending → approved → disbursed
- Full amortization schedule + penalties
- Loan aging and default tracking

📝 Loan Module Tasks (Plain Statements)

- Add a loan
- Add a group loan
- Clear penalties
- Create group loan schedules
- Create individual loan schedules
- View customer loan portfolio
- List defaulted loans
- List disbursed loans
- Show expected repayments
- View fully paid loans
- Display interest receivables
- Record loan repayments
- Analyze loan ageing
- Show loans approaching their last installment
- View loans in arrears
- Display loan graphs and summaries
- List missed payments
- Show missed schedules
- View loans nearing their final installment
- View outstanding loans
- Manage penalties
- Analyze portfolio at risk
- Record old loans
- Record a repayment
- Handle redisbursed loans
- Process rollover repayments

Daily Collections

- Track daily collections grouped by date and collector
- View and validate summaries

Repayment Module

- Track individual payments
- Linked to amortization
- Auto-update remaining balances
- Full history per loan

Savings Management

- Borrowers can save before borrowing (rule-based only for some types of loans)
- Track deposits, withdrawals, balances
- Integrated with general ledger

Capital & Grants

- Track capital from donors/owners
- Add and withdraw
- Link funds to usage (loans or expenses)
- Report by source and purpose

Income & Expenditure

- Track income (fees, grants, interest)
- Add income and expenditures
- Track categorized expenses (e.g., salaries, fares, etc.)

Financial Records

- Double-entry accounting system
- Auto-generated journal entries
- Generate:
- - Trial balance
- - Balance sheet
- - Cash flow statements

Assets & Collateral

- Track internal assets and borrower collaterals
- Attach documents and values
- Link collaterals to specific loans

CRM / Bulk SMS

- Send scheduled messages to borrowers
- Set reminders based on loan due dates

Settings & Configuration

- Admin manages:
- - Loan types, interest rates, penalties
- - Payment methods, regions, date formats,
- - Holiday calendars and notifications

Lookup Tables

- Admin CRUD for:
- - Loan types
- - Expense categories
- - Regions, branches, etc.

Reports & Analytics

- Loan portfolio summaries
- Savings and repayment performance

- Defaults and overdue reports
- Export options (PDF, Excel)

UI & UX Design Requirements

- Aesthetic interface with primary colors: #ffffff(white), #1e7570 (teal),
- Secondary: subtle gray and pale light blue
- Support for light and dark modes
- Dashboard with clear charts and graphs
- Clickable cards for:
  - Total disbursed loans (monthly)
  - Number of registered borrowers
  - Overdue loans
- Quick actions: Add borrower, Create loan, Record payment

Tech Stack

- Backend: Django
- Database: PostgreSQL
- Frontend: HTML, CSS, JavaScript (Bootstrap optional)
- Authentication: Staff login with role-based access
- Hosting: Ready for deployment on any standard server (e.g., Heroku, DigitalOcean)
